Wolf Minerals Announces ISO 14001 Certification for its Environmental Systems at Hemerdon Tungsten and Tin Project

Specialty metals development company, Wolf Minerals Limited (ASX: WLF, AIM: WLFE) (“**Wolf**” or “**the Company**”) is pleased to announce that it has been recommended for ISO 14001 certification for its environmental management systems which have been implemented at the Company’s world class Hemerdon tungsten and tin project (“**the Project**”) in Devon, southwest England.

The implementation of an environmental management system is a condition of the Environment Agency’s permit for the Project and is required to be in place prior to the commencement of processing tungsten ore.

Certification to the ISO 14001 Standard provides assurance to all stakeholders that the environmental impact of the Hemerdon Project is being managed, measured and mitigated as it develops through commissioning and into operations.

Commenting on the certification, Managing Director of Wolf Minerals, Russell Clark, said

“It is unusual to have certification in place prior to an operation commencing and our environmental team is to be commended on its efforts that have resulted in this successful outcome.”

“The certification is a stamp of approval that we have the necessary systems and processes in place to manage and monitor our environmental performance and it will provide our local communities and other stakeholders the comfort that we are managing the environment in which we work to the highest standards.”

About Wolf Minerals

Wolf Minerals is a dual listed (“**ASX: WLF**”, “**AIM: WLFE**”) specialty metals company. With global demand for tungsten rising and future global production expected to be constrained, Wolf Minerals is developing a large tungsten resource at its Hemerdon project, located in the southwest of England (see Project location map). The Company has strong cornerstone investors and project finance and environmental permitting in place. Wolf has also secured all major contracts for the project, with GR Engineering appointed as the EPC contractor and CA Blackwell being awarded the Mining contract. Production is expected to commence in mid-2015.
