Aurum hits further high-grade gold at Boundiali's BMT3 deposit, Côte d'Ivoire

Aurum Resources (ASX: AUE, "Aurum" or "the Company") is pleased to announce further encouraging high-grade gold results from its infill and step-back drilling, part of its 100,000m drilling program in CY2025 at the 2.41Moz Boundiali Gold Project¹ in Côte d'Ivoire. The new drilling is designed to grow and increase confidence in Mineral Resources at Boundiali's BMT3 deposit and has successfully confirmed multiple high-grade gold intercepts.

Encouraging new drill intercepts include²:

- **BMT3 Deposit:**
 - **6.89m @ 7.22 g/t Au** from 233.79m inc. **5m @ 9.67 g/t Au** (MBDD332)
 - **17.30m @ 2.64 g/t Au** from 295.70m inc. **9m @ 4.75 g/t Au** (MBDD340)
 - **5m @ 5.76 g/t Au** from 206m inc. **1.14m @ 23.30 g/t Au** (MBDD329)
 - **3.15m @ 6.92 g/t Au** from 82m inc. **1.43m @ 14.89 g/t Au** (MBDD321)
 - **12m @ 1.68 g/t Au** from 293m inc. **1m @ 11.12 g/t Au** (MBDD339).

Project Growth & Development:

- **Mineralisation remains open:** Gold mineralisation remains open along strike and at depth, indicating significant potential for resource growth.
- **Strong Catalyst Pipeline:** Updated Mineral Resource Estimates (**MRE**) for Boundiali (2.41Moz) and Napié (0.87Moz), along with the Boundiali Pre-Feasibility Study (**PFS**), are all scheduled for release in **Q1 CY2026**.
- **Aggressive 2026 Growth:** Planning and commenced **100,000m** of diamond drilling at Boundiali for 2026, with two additional MRE updates targeted for mid and late year. Another **30,000m** diamond drilling planned for Napié.
- **Well-Funded:** Robust unaudited cash balance of **~\$40.1M** as of 31 December 2025 to fund 2026 development and exploration.

Aurum's Managing Director Dr. Caigen Wang said: *"These new results at BMT3 deliver exactly what we need for our upcoming resource update: increased confidence and clear evidence of depth extension. We have successfully hit high-grade intercepts deeper than 250m, proving the system remains wide open."*

This batch of results is the final that will be included in our update for Boundiali, which remains on track for delivery in Q1.

With \$40M in the bank and our owned fleet of 12 diamond drill rigs, we are moving at a pace few peers can match. This drilling is directly feeding into the Boundiali PFS due this quarter, as we establish a clear pathway toward a Definitive Feasibility Study (DFS) in late 2026."

Gold mineralisation at **BMT3** is hosted in a diorite emplaced between volcanic and sedimentary rocks and is characterised by disseminated pyrite with quartz veinlets and quartz veins, occasional visible gold and associated with silica, carbonate and chlorite alteration. True widths for these shallow gold intercepts are estimated at about 60% - 80% of reported downhole lengths.

*Details of drill collar location and assay results and intercepts for the new drilling at **BMT3** can be found in Table 1 and Table 2 respectively. Plans showing location of the Boundiali Gold Project and the assay results are presented in the following figures: General locations in Figure 1 and Figure 2, and project details in Figure 3. The gold mineralisation is mesothermal in origin and occurs as free gold in quartz vein stockworks and zones of silicification, associated with pyrite and chalcopyrite.
